

## VakkaTaimi. Inventaari 01.01.2020

**Lue** varauksin, sillä inventaari on tarkoitettu alun perin omaan käyttöön ja muokkaaminen yleiseen käyttöön sopivammaksi on vain osittaista. Inventaarin taimista osa on jo myyty tai varattu, osa menee omiin istutuksiin, osa saattanut kärsiä talvesta. Osa on myös liian pientä kasvupaikkaansa vielä istutettavaksi – nämä sopivat sen sijaan jatkokasvatukseen.

**Muutama** apu tulkintaan: pie tai p = pieni astia P9; 1 tai 1L tai P11 = 1 litran astia; samoin 2, 3, 4, 5, 7,5 jne astiat; PL-25 = Plantek-kenno, noin 0,4 litraa per lokero; PL-64 Plantek-kenno, alle 0,2 litraa per lokero; ST-11 = styrox-kenno, 1,5 litraa per lokero; ST-70 = styrox-kenno, 0,2 litraa per lokero; Pss = pussi; Ltk = laatikko; /k = kylvös jne. Sarakkeet kertovat taimien sijainnin talvivarastoissamme 01.01.2020. Tästä inventaariversiosta puuttuvat v. 2019 pistokaslisäykset ja suurin osa talven 2020 kylvöksistä.

**Tieteellisen nimistön** oikeinkirjoitus, ajantasaisuus ja heimosijoittelu on osaksi tarkistamatta. Joitakin uusittuja suomalaisia nimiä on vältetty käyttämästä jo vakiintuneiden ollessa olemassa. Samoin on suhtauduttu joihinkin epäonnistuneisiin uusiin suomalaisiin nimiin.

## VakkaTaimi Inventory 01.01.2020

**Ought to be read** with caution, as the inventory is intended to be for our own use, and modifying it for general use is only partial. Some of the plants in the inventory are already sold or reserved, some will go to our own plantings, some may have suffered from winter. Some are still too small to plant - these are instead suitable for grow further. **Some clarifications** with abbreviations: pie or p = small container P9; 1 or 1L or P11 = 1 liter container; same with 2, 3, 4, 5, 7,5 etc. containers; PL-25 = Plantek tray, about 0.4 liters per cell; PL-64 Plantek tray, less than 0.2 liters per cell; ST-11 = styrofoam tray, 1.5 liters per cell; ST-70 = styrofoam tray, 0.2 liters per cell; Pss = bag; Ltk = box; /k = seed sowed. The columns of winter storage positions tell the amounts of plants in those particular storages at 01.01.2020. This inventory version mostly does not contain the vegetative propagations of the year 2019 and most of the winter 2020 sowings.

**The spelling**, up to date-being, and family-placement of the scientific names are partly unverified. Some new or remodelled Finnish names have been avoided preferring already established names. Likewise, some unsuccessful new Finnish names are rejected choosing to use more appropriate ones, few of them of our own introduction.

## VakkaTaimi Inventering 01.01.2020

**Borde läsas** med reserverandet, eftersom inventeringen är avsedd att vara till vår eget bruk, och modifiering för allmän användning är endast delvis. Några av plantorna i inventeringen har redan sålts eller reserverats, vissa kommer att gå till våra egna planteringar, vissa kan ha lidit från vintern. En hel del är ännu för små att plantera permanent - de är däremot lämpade för att växa vidare.

**Några förklaringar** med av förkortningar: pie eller p = liten kruka P9; 1 eller 1L eller P11 = 1 liter kruka; samma med 2, 3, 4, 5, 7,5 etc. krukor; PL-25 = Plantek-tråg, ca 0,4 liter per cell; PL-64 Plantek-tråg, mindre än 0,2 liter per cell; ST-11 = frigolittråg, 1,5 liter per cell; ST-70 = frigolittråg, 0,2 liter per cell; Pss = påse; Ltk = låda; /k = sådd. Kolumnerna för vinterförvaringspositioner visar var plantorna är belägna i våra viterlager 01.01.2020. Denna inventeringsversion innehåller inte de vegetativa förökningarna av året 2019 och inte heller höstens vinterns 2020 sådder.

**Stavningen**, uppdatering och familjeplacering av de vetenskapliga namnen är delvis obekräftade. Några nya eller ombyggda finska namn har undvikits och redan etablerade namn har föredragits i stället. På samma sätt har några misslyckade nya finska namn blivit avvisade och valts att använda mer lämpliga, några av dem av vår introduktion.
